(54) Title: MAGNETIC ENRICHMENT METHOD, A REACTOR UNIT FOR MICRO PARTICLES AND A MAGNET UNIT

(57) Abstract: Magnetic enrichment method, wherein
the desired biological component is collected from a
solution, which component is thereafter enriched in
a liquid in such a manner that by means of the micro
particles attached to the magnet or attached by means of
at least one magnet at least one biological component is
collected in a closed reactor vessel. Thereafter at least
one biological component is enriched in such a manner
that the desired component is released to the solution.
The reactor unit is a closed vessel, wherein the prevailing
conditions are controllable. The shape and the location
of the magnet unit in the reactor unit are adjusted in
a preferable manner to collect the desired biological
component.
